

Email2SMS GlobalMessaging vs. CM.com

Same / Similar

Sender ID / Originator

The Sender ID needs to be preset.
This can be done in the webapp

Signature

Signatures in the email are never
deleted

Spaces in Sender ID

Spaces in the Sender ID are
always deleted

Differences

GlobalMessaging

Format recipient

447920567890.Un1q43ID@sms.gm-sms.com

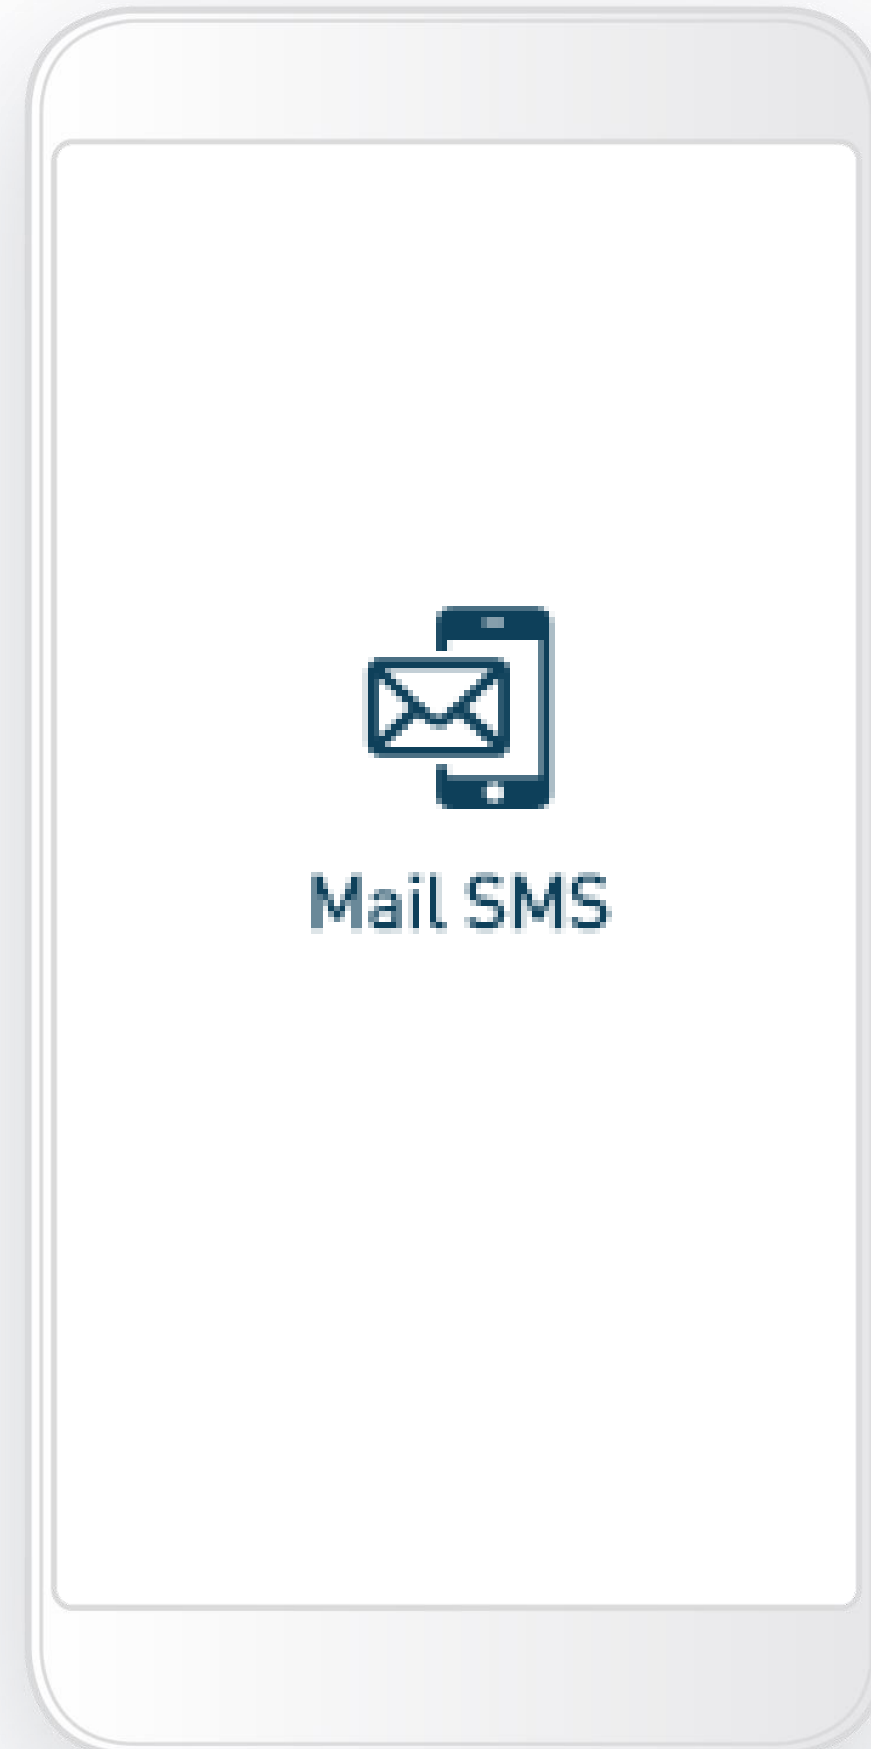

Line breaks are read

An email with a Line break will read the line break and present as a space.

So it will be shown like this

Replies not possible

Replies on an Email2SMS can not be read because the originator cannot be set to a long number

CM.com

Format recipient

+447920567890@mail-sms.com

Line breaks are deleted

An email with a Line break will just delete the line break and present as a space. So it will be shown like this

Replies enabled

By setting up an originator that matches the shared long code, replies will be forwarded to your account

Be part of it
